

AMENDMENTS TO THE SPECIFICATION

Please replace the present Abstract of the Disclosure with the following, amended

Abstract:

A fixing structure for fixing a color wheel to a base of a projector is provided. The color wheel is rotatably installed and includes a color rotating disc having a plurality of color filters selectively transmitting light of a predetermined wavelength ~~among white light emitted from a lamp and rotatably installed such that the respective color filters are sequentially arranged on an optical path,~~ and a driving source which drives the color rotating disc ~~to rotate~~. The fixing structure includes a first cover member coupled to ~~the~~ a base, and a second cover member coupled to the first cover member and together therewith encompassing the color wheel. A bracket is provided to which the color wheel is coupled, and a coupling unit couples the bracket to the second cover member. A buffer member is provided between the first and second cover members and between the bracket and the second cover member for reducing vibration ~~generated from the color wheel and transferred to the second cover member via the bracket, and vibration transferred from the second cover member to the first cover member.~~
